

Jeneliya Gurung

Full Stack Developer | New Jersey | 251-373-6731 | jeneliyagurung6@gmail.com | <https://www.linkedin.com/in/jeneliya-gurung/>

Professional Summary:

Results-driven **Full Stack Developer** with 5+ years of experience in designing and delivering scalable web applications. Proficient in **Java, Spring Boot, and Spring MVC** for backend development, paired with **React.js and Angular** for modern, responsive UI development. Expertise in building **RESTful APIs, microservices**, and deploying containerized applications with **Docker and Kubernetes**. Strong background in **database management (PostgreSQL, MySQL, Cassandra)**, **CI/CD pipelines (Jenkins, GitLab CI/CD)**, and **Agile methodologies**. Passionate about **test-driven development (TDD)** and optimizing applications for high performance and scalability.

Technical Skills:

- **Programming Languages:** Java, JavaScript (ES6+), HTML5, CSS3
- **Frameworks & Libraries:** Spring Boot, Spring MVC, Spring Batch, Angular, React.js, Bootstrap
- **Web Services:** RESTful APIs, SOAP, OAuth2, JWT Authentication
- **Databases:** PostgreSQL, MySQL, Cassandra
- **Tools & Technologies:** Docker, Kubernetes, Jenkins, Maven, Git, GitLab CI/CD, JMeter, SonarQube
- **Methodologies:** Agile/Scrum, Test-Driven Development (TDD)
- **Other:** Apache Kafka, Highcharts, ETL pipelines, Performance Testing, Responsive Design, Microservices Architecture

Professional Experience:

J.P. Morgan Chase
Full Stack Java Developer

New York, NY, USA
Apr '23 – Present

- Developed mission-critical financial applications using **Java** and **Spring Boot**, implementing robust business logic to support high-volume trading and risk management operations.
- Implemented secure authentication and authorization using **OAuth2** and **JWT**, ensuring compliant and safeguarded access to sensitive financial systems.
- Designed and developed scalable microservices with **Spring Boot**, enabling seamless communication via **RESTful APIs** across diverse financial systems.
- Integrated real-time data streaming with **Apache Kafka** to monitor high-frequency transactions, enhancing proactive risk management and system responsiveness.
- Wrote **Docker** scripts to containerize applications and implemented **Kubernetes** orchestration for automated deployment and scaling, significantly enhancing application reliability and scalability.
- Optimized **PostgreSQL** performance by designing efficient schemas and tuning queries, while integrating **Cassandra** to handle high-volume, low-latency transactions critical to financial data management.
- Built modern, responsive user interfaces using **React** leveraging **Redux** for effective state management to deliver intuitive dashboards and reporting tools for financial analytics.
- Developed a dynamic financial reporting dashboard using **React** and **D3.js**, providing real-time insights into trading performance and risk metrics for senior management.
- Led the integration of a market data feed into the core trading platform, ensuring accurate and timely updates that supported high-frequency trading strategies.
- Achieved **90%+ test coverage** by developing comprehensive unit and integration tests with **JUnit** and **Cucumber**, ensuring robust quality and reliability of financial software.
- Collaborated with cross-functional teams in an **Agile** environment, using **Bitbucket** for version control and **JIRA** for project management to translate complex financial requirements into scalable, regulatory-compliant solutions.

Environment: Java, Spring Boot, RESTful APIs, OAuth2, JWT, Apache Kafka, PostgreSQL, Cassandra, Docker, Kubernetes, Jenkins, React, Redux, D3.js, JUnit, Cucumber, Bitbucket, JIRA, Agile/Scrum, AWS Cloud

Cedar Gate Technologies
Full Stack Developer

Greenwich, CT, USA
Aug '20 – Dec '21

- Led development of a healthcare analytics platform that processed large-scale patient data using **Java**, **Spring Batch**, and **Apache Kafka** to deliver actionable insights and support real-time monitoring.
- Developed **SOAP-based web services** with **XML** and **XSD**, ensuring strict schema validation and seamless integration with external healthcare systems.
- Designed a predictive analytics dashboard with **Angular** and **Highcharts**, empowering healthcare administrators to monitor key performance indicators and drive data-informed decisions.
- Enhanced database performance by optimizing **MySQL** schemas and queries and integrating **Cassandra** to manage high-volume, low-latency transactions across diverse sectors, including financial and healthcare services.
- Migrated legacy monolithic applications to a cloud-based **microservices architecture** on **AWS (EC2 and S3)**, significantly improving system reliability and reducing operational costs.
- Built **HIPAA-compliant APIs** with **Spring Boot** to ensure the secure handling of sensitive patient data.
- Optimized **React** front-end performance through **lazy loading** and **code splitting**, ensuring a smooth user experience even on low-bandwidth connections.
- Automated **CI/CD pipelines** using **GitLab CI/CD** and **SonarQube** for continuous integration, code quality, and efficient deployments.
- Conducted **performance testing** with **JMeter** to identify and resolve bottlenecks, ensuring the platform met stringent **service-level agreements (SLAs)**.

Environment: Java, Spring Boot, Spring Batch, Apache Kafka, SOAP Web Services (XML, XSD), Angular, Highcharts, MySQL, Cassandra, AWS (EC2, S3), React, GitLab CI/CD, SonarQube, JMeter, HIPAA Compliance

Riddhasoft
Front-End Developer

Kathmandu, Nepal
Feb '18 – Jun '20

- Designed and developed responsive user interfaces using **Angular** and **Bootstrap**, ensuring high usability and consistent performance across desktops, mobiles, and tablets.
- Implemented dynamic front-end functionalities including **form validations**, **custom directives**, and **reusable components** to enable seamless integration with back-end services.
- Modernized a **monolithic architecture** by transitioning the front-end to a **modular structure** with **Angular**, resulting in a **30% reduction** in build and deployment times and improved code maintainability.
- Optimized application performance by implementing **lazy loading** and other **performance techniques**, significantly reducing initial page load times and ensuring smooth rendering across all major browsers.
- Collaborated closely with **UI/UX designers** to translate **wireframes** and **prototypes** into visually appealing, intuitive web pages, adhering to **responsive design** principles.
- Developed robust **client-side workflows** and components to enable **real-time data updates** and enhance overall interactivity, contributing to a smoother user experience.
- Authored and maintained **comprehensive technical documentation** to clearly communicate the **front-end architecture** and workflows to team members and stakeholders.
- Actively participated in **Agile sprints**, gathering end-user feedback to iteratively improve **navigation**, **accessibility**, and **front-end functionality**.

Environment: Angular, Bootstrap, JavaScript (ES6+), RESTful APIs, Agile/Scrum, Responsive Design, Lazy Loading, Version Control (Git)

Education

Monroe College
Master of Science in Computer Science
GPA: 3.92

The British College
Bachelor of Science in Computing
First Class Honours
